## REGULAR CLASS-ROOM

Strathroy's newest and modern Junior School, located on Keefer Street, incorporates the latest in school design. Situated on an ample sized lot, it is planned for future expansion.

The cement block design does away with the need of plastering, as paint and cement enamel are applied directly to the blocks.

Automatic gas heat, and ample storage space are provided.

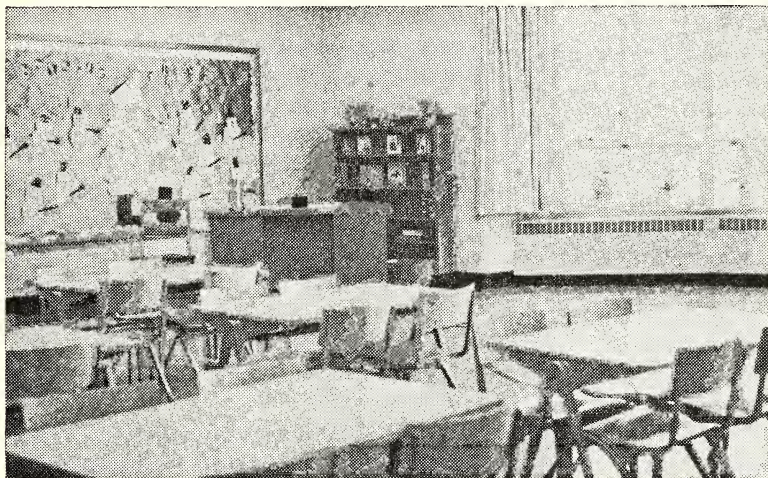

Project cupboards and cloakroom space with folding doors, in each of the regular classrooms, are designed to conserve space. Woodwork is birch, stained a light colour.

---

---

## KINDERGARTEN ROOM

Fluorescent lighting and acoustic tile ceilings add to the efficiency of the rooms.

Special cloakroom facilities are provided for the younger pupils. Floors are of mastic tile and, in the kindergarten room, are laid with a large circle for use in the junior programme.

A wide range of colour schemes, on walls and floors, add to the individuality of the rooms.

The spacious kindergarten, equipped with the latest in furnishings, provides a bright and cheerful atmosphere for those beginning their school career.
